

Week 3 Visual Narratives - StaySense BI

Monthly Average Guest Review Score

(W3_Chart1.png)

What the chart shows: This line chart presents the monthly average guest review score, helping identify trends in customer satisfaction over time.

Key observation: Review scores remain relatively stable with only small fluctuations, indicating consistent service quality across most months.

Business decision: Management can monitor future declines early and investigate operational issues before customer satisfaction is significantly affected.

Top 10 Hotels by Number of Reviews

(W3_Chart2.png)

What the chart shows: This bar chart compares the ten hotels receiving the highest number of guest reviews.

Key observation: A few hotels account for a disproportionately large share of customer feedback.

Business decision: High-volume hotels should receive continuous sentiment monitoring, while low-volume hotels may benefit from initiatives encouraging guests to leave reviews.

Correlation Heatmap

(W3_Chart3.png)

What the chart shows: The heatmap summarizes relationships among numerical variables in the dataset.

Key observation: Reviewer scores have relatively weak correlations with most numerical variables, suggesting satisfaction depends on multiple factors.

Business decision: Combine review scores with sentiment and thematic analysis for better business decisions.
