

AI-ENABLED BUSINESS INTELLIGENCE

Week 4 — Mini Dashboard Project

1. Overview of the Week

This week you move from static charts to an interactive, shareable dashboard. You will select a real dataset with at least 500 rows, prepare it cleanly, and build a 3-chart dashboard in Google Looker Studio (recommended) or Tableau Public. Your dashboard will have a public URL that anyone can open. Alongside, you will write a 200-word Dashboard Narrative explaining key insights in simple, non-technical language. This is a mandatory program deliverable — one of the two role-specific mandatory submissions for the BI track.

2. What You Will Do This Week

- **Select or confirm your dataset:** use your Week 1 dataset (if it has ≥ 500 rows) or pick a new one. If picking new, good sources:
 - **Kaggle** (kaggle.com/datasets) — filter by size
 - **World Bank Open Data** (data.worldbank.org)
 - **data.gov.in** — Indian open datasets
 - **Google Dataset Search** (datasetsearch.research.google.com)
- **Clean and prepare the data:**
 - Remove nulls from key columns (or handle them deliberately).
 - Ensure dates are proper date type, numbers are numeric type, categories are clean strings.
 - Save the cleaned dataset as a CSV — this is what your dashboard will use.
 - You can do this prep in Google Sheets or Python; then export/upload to the dashboard tool.
- **Build a 3-chart interactive dashboard** in Google Looker Studio (lookerstudio.google.com — free, lives in your Google account) or Tableau Public (public.tableau.com — free, requires desktop app install):
 - **Chart 1 — Trend chart:** line chart showing change over time (e.g., revenue by month).
 - **Chart 2 — Comparison chart:** bar chart comparing categories (e.g., sales by region).
 - **Chart 3 — Breakdown / Distribution chart:** pie, donut, histogram, or treemap showing composition (e.g., share by product category).
- **Add at least 1 interactive filter** — e.g., date range control, region dropdown, or category selector.
- **Add a dashboard title, subtitle, and at least 1 KPI card** (e.g., total revenue, total orders, average value) prominently at the top.

AI-ENABLED BUSINESS INTELLIGENCE

- **Publish / share the dashboard:**
 - **Looker Studio:** click "Share" → set link access to "Anyone with the link can view".
 - **Tableau Public:** publish to your Tableau Public profile (all Tableau Public dashboards are automatically public).
 - Copy the live dashboard URL.
- **Write the Dashboard Narrative (200 words):**
 - What the dashboard shows overall (40 words).
 - 3 key insights the dashboard reveals (80 words — roughly 25–30 per insight).
 - What a business decision-maker should do with this information (50 words).
 - Keep language non-technical — write as if explaining to someone who doesn't know pandas or SQL.

3. Learning Outcomes for the Week

Week Outcome	Mapped to CLO
Clean and prepare a real-world dataset with 500+ rows for dashboard use	CLO-2
Build a 3-chart interactive dashboard in Looker Studio or Tableau Public	CLO-3
Add interactive filters and KPI cards to enable user exploration	CLO-3
Communicate dashboard findings to a non-technical audience in clear prose	CLO-3, CLO-7

4. Resources

4.1 YouTube Videos

5. Deliverables

Deliverable 1: Live Dashboard URL

This is a mandatory program deliverable (one of two BI role-specific mandates).

- Published dashboard on Looker Studio or Tableau Public.
- Share link set to "Anyone with link can view" (Looker Studio) or made public on your Tableau Public profile.
- Dashboard must contain:
 - A clear title and subtitle
 - At least 1 KPI card (total, average, or count metric prominently displayed)
 - 3 chart types: trend (line), comparison (bar), breakdown/distribution (pie/donut/histogram/treemap)
 - At least 1 interactive filter (date range, category dropdown, or similar)
- Paste the live URL into the Form shared for the Week 4 submission.

Deliverable 2: Dashboard Narrative (200 words)

- PDF document.
- Structure:
 - **Section 1 — Dashboard Overview** (40 words): what the dashboard shows and for whom.
 - **Section 2 — Key Insights** (80 words, 3 insights at ~25–30 words each): findings that the dashboard reveals. Be specific with numbers.
 - **Section 3 — Business Recommendation** (50 words): what a decision-maker should do with this.

AI-ENABLED BUSINESS INTELLIGENCE

- **Section 4 — Caveats / Data Limitations** (30 words): what the dashboard cannot tell us.
- Total: 200 words (± 15 words).
- File name: W4_DashboardNarrative_[InternID].pdf

Deliverable 3: Dashboard Screenshot (for records)

- A single PDF screenshot of the dashboard as rendered.
- Include in the same submission as the narrative or as a separate 1-page PDF.

6. Submission Instructions

- Submit W4_DashboardNarrative_[InternID].pdf and the dashboard screenshot PDF via the **form shared for Week 4 by Sunday 11:59 PM IST**.
- Paste your **Live Dashboard URL** in the remarks section of the form.
- Submit the **Weekly Progress Report** via the form shared by zipping it together with the other deliverables by **Sunday 11:59 PM IST**.
- **Reminder:** The live dashboard URL is a **mandatory program deliverable** for BI interns. Missing it without prior PoC communication affects certification.
