

Case Study 1 – Swiggy

Company

Swiggy

Business Problem

Swiggy operates in a highly dynamic food delivery market where customer demand changes rapidly based on factors such as time of day, weekends, weather, and festivals. The company needed a scalable Business Intelligence system to accurately forecast demand, allocate delivery partners efficiently, reduce delivery delays, and improve customer satisfaction while maintaining operational efficiency.

KPIs Tracked

- Average Delivery Time
 - Order Completion Rate
 - Customer Satisfaction Score (CSAT)
 - Order Cancellation Rate
 - Active Delivery Partners
 - Repeat Customer Rate
-

Data Sources

- Customer order database
 - Restaurant management system
 - Delivery partner GPS data
 - Mobile app activity
 - Payment transaction records
-

Tool Stack

- Python
 - SQL
 - Apache Spark
 - AWS Cloud
 - Amazon Redshift
 - Tableau
-

Business Decision / Outcome

By analyzing real-time operational data, Swiggy improved delivery partner allocation and optimized delivery routes. Demand forecasting helped position delivery executives in high-demand areas before order spikes occurred. These insights reduced delivery times, lowered cancellation rates, and enhanced the overall customer experience while improving operational efficiency.

Case Study 2 – Zomato

Company

Zomato

Business Problem

Zomato needed to improve restaurant discovery and customer engagement while helping restaurant partners maximize sales. The company leveraged Business Intelligence to analyze user behavior, restaurant performance, ratings, and order trends to deliver personalized recommendations and improve platform efficiency.

KPIs Tracked

- Restaurant Ratings
 - Order Frequency
 - Customer Retention Rate
 - Average Order Value
 - Search-to-Order Conversion Rate
 - Delivery Success Rate
-

Data Sources

- Customer search history
 - Restaurant database
 - Ratings and reviews
 - Order transactions
 - GPS location data
 - User interaction logs
-

Tool Stack

- Python
 - SQL
 - Hadoop
 - Tableau
 - Internal BI Dashboards
-

Business Decision / Outcome

Data-driven insights enabled Zomato to personalize restaurant recommendations, improve search ranking algorithms, and identify underperforming restaurants. These improvements increased customer engagement, boosted order volumes, and helped restaurant partners make informed operational decisions based on performance analytics.
