

Deliverable 3: BI Maturity Model Mapping

<i>Dimension</i>	<i>Emerging</i>	<i>Developing</i>	<i>Established</i>	<i>Leading</i>	<i>Current Level (StaySense BI)</i>
<i>Data Availability</i>	Basic operational data	Multiple structured datasets	Integrated data warehouse	Real-time enterprise data	✓ Developing
<i>Tooling</i>	Excel	Power BI, SQL, Python	Cloud Data Warehouse	AI & Predictive Analytics	✓ Developing
<i>Team</i>	No dedicated analyst	Small analytics team	Dedicated BI department	Data Centre of Excellence	✓ Emerging
<i>Use of Insights</i>	Rarely used	Supports business decisions	Embedded in operations	Drives business strategy	✓ Developing

Justification-

StaySense BI is currently at the *Developing* stage of BI maturity. The project leverages structured Airbnb listing data with Python and Power BI to deliver interactive dashboards and KPI-driven insights that support business decision-making. However, it does not yet include real-time data integration, automated ETL pipelines, predictive analytics, or a dedicated BI team. Incorporating these capabilities would strengthen analytical maturity and help StaySense progress toward the Established stage.
